

Backlink Audit, Link Removal and Disavow Proposal

Google has just announced that [Penguin 3.0](#) will be released before the end of the year and this will massively affect websites with spammy links, unnatural links or links that you don't realise could possibly hurt your website's organic traffic and search rankings.

At the moment, the Chinese search engine m.biz is penetrating Google SERPs by cloning a site's information such as title tags and meta descriptions and displaying them on its directory (see screenshot below).

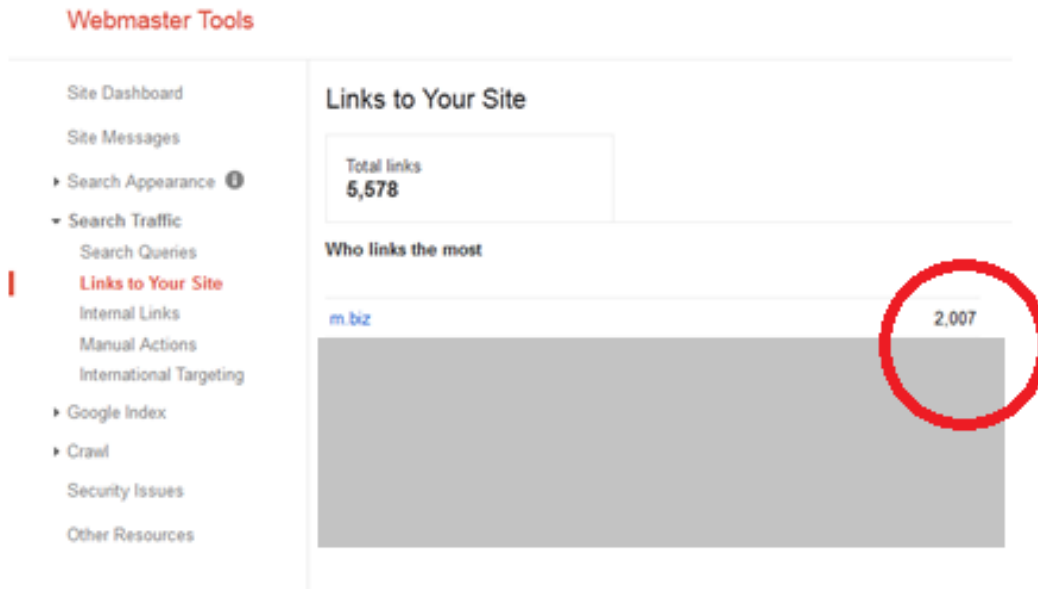

The screenshot shows a search engine results page for the URL `company.m.biz/double-diamond-whetstone.html`. The page displays a list of search results, each with a title, a URL, and a snippet of text. The results are as follows:

This method has negatively harmed many websites. Google can easily detect this as unnatural links and this will be evident in your Google Webmaster Tools (see screenshot below).

Through this, your site will be devalued by Google unfairly. The screenshot below shows how m.biz can affect a site's performance on Google's organic search.

Furthermore, M.biz has hundreds of sub-domains such as the following:

- fair.m.biz
- exhibition.m.biz
- fobprice.m.biz
- gallery.m.biz
- company.m.biz

In order to combat the severity of M.biz links and other negative links before the release of Penguin 3.0, we highly recommend conducting an immediate link audit of your site and remove or disavow low quality links.
